You can also hide them by setting a preference. Changes to the graphic scale ratio of the engineering drawing: Drawings and models on the Engineering Drawing and Presentation drawing canvas have been updated to use a new ratio (1:1.05) that adjusts to the width of the screen. Handling of animation layers: The drawing environment is updated to handle layers that are directly used in animation frames. When you insert a symbol and set the animation frame, you no longer need to use a separate layer for your animation. Opening existing PDF files for engineering drawings: With the new Open PDF document and Open DWG document options in the Ribbon, you can open existing PDF files for engineering drawings. Changes in the SLD editor: The SLD editor now displays the entire value range for an attribute in an interactive display that allows you to set and edit values. Every attribute's default unit is now shown in the description box. You can now create a large chart using a tabular outline view, and select individual table rows. Minor improvements in the ribbon and add-ons: "Page Setup" is now included in the Print dialog. This dialog now supports features such as paper size and orientation, scaling, and page rotation. The ribbon tab is now also visible in a subset of the different options in the Windows taskbar context menu. Improved functionality for the line tool: You can now right-click the line tool to open an editing context that allows you to enter geometric values such as length, angle, and center.
