This todo.txt task list manager can help you stay on top of things and achieve more in less time. It is designed to be easy-to-use and very intuitive. An app to write todo.txt files The todo.txt system was designed as an alternative to overly-complex to-do list applications. It enables you to write your tasks and organize them in plain text files using a simple notation system. If you're looking to make things slightly more intuitive, you may be interested in SimpleTaskList. It is a Java-based application designed to help you manage your todo.txt files from an intuitive UI. Work with plain text files and leave complex task management applications behind While it is not necessary to be familiar with the todo.txt notation system in order to use this utility, it won't take you more than a few minutes to learn everything you need to know. Essentially, every line in the document is a separate task, and a few formatting parameters are used to indicate the task's priority, context, project, due date and status. The to-do list is easily readable and editable with any plain text editor. Simple task management utility based on the todo.txt system The first thing you need to do is open your existing to-do list or create a new one. Adding tasks is a very straightforward process, as you can set their priority, due date, context and project without using the todo.txt notation. Tasks are displayed in a simple table, and you can filter them based on context, project or due date. However, it does not seem to be possible to customize the default sorting method, and the application does not include a search function. The to-do list can be saved automatically at regular intervals, and you can use a number of customizable keyboard shortcuts to work more efficiently. Minimalistic user interface As you can probably tell, the UI was designed to be as straightforward as possible. It doesn't look all that impressive, and it
