Optical communications components such as modulators, switches, multiplexers, splitters and variable attenuators have traditionally been assembled using soldered components such as, for example, electronic subassemblies (e.g., chips or electronic components such as resistors, capacitors, inductors, and the like) mounted to a leadframe, for example, using surface-mount technology (SMT). This requires a certain level of manual intervention during assembly of the components into the communications component, for example, during the SMT process. If a component needs to be replaced or otherwise modified during the assembly process, additional manual intervention is required to replace, modify or replace the component, for example, by applying solder paste or adding solder using a pick and place process. These components are not very precise, which can lead to fluctuation of the resulting optical communications component. In addition, soldered components can sometimes be damaged during the SMT process, for example, by over-heating of the components and the leadframe, or by SMT misalignment. Lastly, soldering components requires a relatively long process time. In view of these and other deficiencies, there remains a need for improved solder-free optical communications components.Q: How to use Try/Catch inside Try/Catch and it will just print the first error in the list and it will stop processing I want to use try/catch inside try/catch and it will just print the first error in the list and it will stop processing. Choose Edit **> Special** **> Clone Stamp** or press Alt+Ctrl+E. 3. **3.** Click **OK** in the Clone Stamp dialog box. There are four variations of the Clone Stamp tool. The selected area of the stamp is highlighted in the image. 5. **5.** Click the image where you want to use the stamp, and then release the mouse button. 6. **6.** The stamp is pasted in the new area, affecting the pixels in the lightest-gray-color range in the overlapping area, just like you see in the images (**Figure 4.1, Figure 4.2**, or **Figure 4.3**). 7. **7.** To see the result in another way, choose Edit **> Expand.** It's better to work on a duplicate layer that's behind the originals, or you'll eventually lose it. **Figure 4.1** : The most effective variant of the Clone Stamp **Figure 4.2** : Using the most appropriate variant **Figure 4.3** : The best variant for this image If you experiment with the different brush and pen variants, you'll see how each one affects the colors in the image. The different edges used with the brush and pen tools are shown in **Figure 4.4** (for the pen and brush tools, respectively). I'll explain these tools further in Chapter 13. * * * **Figure 4.4** : Brush tool So how do you get started with brushes and pens? First, let's talk about using brushes.
