I want the method to return an int representing the index of the object in the array. I tried a number of things like removing the object and returning that but it seems like

The new user interface will give you more room to work and stay on top of your

workflow. It is consistent with other drawing tools and provides a single place to find common controls and configure drawings. It also introduces user interface elements that support rapid interaction. For example, you can preview selected objects and change their properties directly in the dialog box, rather than switching to a separate tool, like the Properties tool. You can also

easily find and activate different tool palettes by using the drop-down from the common toolbar. You can always view your drawings on any monitor, including touch-enabled devices. The new user interface provides a simple approach to working with your drawings. Cloud services available from anywhere. You can now open directly from web browser with two new options: Create

Drawing and Switch To Template. Cloud services will continue to expand over time. For example, if you have an Enterprise subscription, you can open new drawings from the cloud directly in your drawing sessions. Note: A subscription is required
