It is used for engineers, architects, designers, draftsmen, and students. AutoCAD features include: Drafting and modeling Drawing, annotation, and labeling 2D and 3D modeling Layout and printing Document management Camera viewport 3D modeling and rendering Video integration Faster workflow Partners and third-party plug-ins Multi-platform and multi-OS compatibility Hierarchical structure Template-based design Macro support Included templates Structure based geometry Layered structures Nested drawings Viewport zoom Referencing AutoCAD LT is a free, open-source version of AutoCAD designed for beginners and open source developers. History of AutoCAD The first three releases of AutoCAD appeared in 1984, 1985, and 1986. The first released version of AutoCAD was 2.5. In 1988, AutoCAD 3.0 was released. AutoCAD 3.1 was released in 1989, 3.2 in 1990, 3.3 in 1991, 3.4 in 1992, 3.5 in 1993, 3.6 in 1994, 3.7 in 1995, 3.8 in 1996, 3.9 in 1997, and 3.10 in 1999. These layers are arranged in a flat structure. A similar feature is known as the "parent-child" relationship, which describes the arrangement of layers in the flat structure. By default, a flat structure is automatically opened in the default view, which is a two-dimensional view. A basic drawing

Some other software, such as Autodesk Inventor, use the same C++ libraries as AutoCAD The exact types of Automation and customization available in the different versions of AutoCAD are not widely documented; however, it is known that both VBA and .NET are available in AutoCAD 2010. The ObjectARX library is available on all versions. The AutoLISP automation capabilities are implemented in the Isplnterpreter.h and Isplnterpreter.cpp files. The library is organized into modules, such as fonts, shapes, drawing tools, object snaps, etc., and functionality is provided by objects. History The first documented use of ObjectARX in AutoCAD was to do AutoLISP functionality. AutoCAD version 1.1 contained this ability to use a LISP interpreter. After LISP was no longer an option with the introduction of AutoLISP support in the Inventor 2D application, ObjectARX continued to be used by third-party LISP programmers. By AutoCAD 2000, support for ObjectARX was used to create many LISP Add-ons including: AutoCAD Architecture and Construction Set AutoCAD Civil 3D AutoCAD Electrical AutoCAD Finishing Set AutoCAD Family Architect AutoCAD Mechanical AutoCAD Map AutoCAD 3D Project AutoCAD Structural Analysis Autodesk Crystal Reports AutoCAD Add-ons (no longer supported by AutoCAD) After 2002, the ability to use ObjectARX for automation in AutoCAD was dropped. However, some functionality was provided by scripting modules based on the ObjectARX API. With the introduction of .NET support in AutoCAD 2010, functionality was re-introduced for AutoCAD 2012. With the transition to the .NET language, the ability to write automation to the LISP interpreter was also removed. AutoCAD 2012 did not contain the Visual LISP API. However, 2012 and 2013 were the only versions to feature ObjectARX, and the class library was used to create the VBA API with the introduction of AutoCAD Architecture. The Visual LISP API was introduced with AutoCAD 2013. ObjectARX as a C++ API An object-oriented automation interface has been available since AutoCAD 2000, providing scripting classes for objects, including Auto ca3bfb1094
