The application has three main components: A design-oriented drawing tool. The design tool enables drafting and drafting-related functions such as drawing, measuring, and straight line and polyline paths, among others. Some of the tools in AutoCAD are relatively new (e.g., the revolve and revolve using dynamic starting position). Others have been redesigned and modified for better performance (e.g., the snap tool, direct and inverse grips, and dynamic grips). The direct and inverse grips now have infinite view instead of 360 degree rotation to make grip-selection a snap. The DesignCenter user interface (UI) has also been updated with AutoCAD 2009. A feature-oriented documentation and publishing tool. The publishing tool enables users to save documents that can be sent to print and used as a reference and in instructional courses. It also enables users to place documents on the Internet. A modeling tool. The modeling tool enables users to create a 2D drawing in 3D space, called a layout. The modeling tool also enables users to create a 3D drawing of any shape (including non-convex shapes). The modeling tool can be used with any type of data, including custom data and 3D CAD data from the Internet or cloud. The software can also operate in two modes: single-user and collaborative. How Does AutoCAD Function? AutoCAD enables users to perform a wide variety of drafting-related tasks. Unlike most other CAD programs, which are designed for drafting and modeling tasks, AutoCAD is designed for design. AutoCAD also supports a range of graphics formats, including raster and vector. Most of AutoCAD's features are functional when these formats are used. However, AutoCAD does not support all types of graphics formats, including bitmapped images. For more information, see the table at the end of this section. An AutoCAD drawing can be viewed in a variety of ways. An AutoCAD drawing file can be saved in a variety of formats. These files can be viewed in one of three ways: the DesignCenter, the Help system, or the command-line interface. Most users interact with the DesignCenter. The DesignCenter displays a variety of information about the drawing. Users can use the DesignCenter to modify the drawing, save the drawing, and navigate through it. Users can also insert layers, change colors, set linetypes, and create

The syntax of the EML has been adapted to fit in with the new Excel scripting paradigm. Format Painter is a proprietary program developed by Autodesk that uses AutoCAD extension language (AEL). It is designed to act as a component of AutoCAD, but can be used in Excel as well. AutoCAD's DXF, drawing exchange format, allows importing and exporting drawing information. MS Word AutoCAD's WriteML is a proprietary format that is intended to allow a direct and automatic translation of a drawing into Microsoft Word document format. Photoshop AutoCAD's UDL/VDSL is a proprietary binary file format to allow AutoCAD drawing objects to be imported and exported directly into Photoshop. Last week, a federal appeals court struck down California's ban on the sale of flavored tobacco products like mint and menthol because it was based on a "flawed interpretation" of the law. Yesterday, in a related but narrower ruling, the court threw out a 2012 initiative requiring restaurants to offer "limited service" food in their outdoor seating areas. There's a lot of energy in the wine world, especially among smaller producers, who believe that the 21st-century system of wine pricing is an unfair trap that puts them in competition with mega-corporations like Constellation, which owns Joseph Phelps, while depriving them of the sales growth that goes along with being in a better place. In this week's Time magazine, National Geographic, and other places, we're hearing stories about entrepreneurs who are trying to start up a wine brand in a new market or doing some tinkering with a winery that was once a big operation. Welcome to California, land of the great winery bust, in which scores of wineries have been shuttered in recent years. California is at the center of a struggle between traditionalist winemakers who cherish tradition and old ways, and entrepreneurs who want to leverage new technology, marketing, and sales. As a consequence, both sides tend to be suspicious of each other. While traditionalists lament the unknowns of the future, those eager to maximize profits cast doubt on their sincerity. "Winery closures haven't just happened," observes Parker Pen Company CEO Dick Parker. "The business is changing as a consequence of the energy, passion, and vision of those who run wineries. If we were in a bubble we could sit here and
