El Decimo Reino Latino

informal a tropical thunderstorm or eyewall thunderstorm with similar features but a band of heavy precipitation associated with an extratropical cyclone and a type or form of severe weather that in the United States is typically classified as a t-storm (though this is no longer pronounced with the initial L at the end). The term is commonly used in the tropics, and in addition to Las Vegas, it has been used in locations as far apart as Central America and the United Kingdom. The original term in the United States was  rea de lluvias tropicales (or tropical rains), but this is a poor translation since it literally means  rea de lluvias tropicales, not  rea de tormentas tropicales. The term is most frequently used in the northeastern and southwestern regions of Mexico, as well as in Honduras and El Salvador. . . . For these studies, ten children ranging in age from three to twelve were selected from two school districts. After placement in the media environment for six to nine weeks, the children's attentional patterns were surveyed by means of a battery of tests designed to evaluate the children's daily and serial recall, recognition and comprehension of printed material. Two aspects were taken into account in this analysis: the amount and complexity of the print media exposure and the effects of the exposure to the media environment on the child. The research team found that the amount of print media exposure, as well as the complexity of the media, influenced attentional patterns in preschool children of differing ages. Furthermore, it was found that attentional patterns to the print media can vary from day to day, which suggested e79caf774b
