MBWages in the UK
rose at their
fastest rate
since the year
2000, new figures
have shown. The

Office for National Statistics (ONS) released data which showed that average weekly pay was 3.1% higher in the three months to January, up to £589.47. It also found that

average earnings were up 2.5% on a year-on-year basis over the same period. Unemployment fell from 4.9% in the three months to December 2017 to 4.2% in the three months to January 2018. ONS

statistician Tim
Moore said:
"After a very
slow start to
2018, the public
sector pay round
came at a time
when other
earnings measures
were bouncing
back - due to the
drop in the

unemployment rate
- which probably
contributed to
the jump seen in
average
earnings." The
ONS measures
average weekly
pay by
calculating pay
at an hourly rate
of the employee's

normal wage and adding on allowances. It then divides that by the total number of hours worked by the employee in a normal week. Commenting on the figures, Mark Carney, governor

of the Bank of England, said the economy had grown strongly in 2017, but that wage growth had lagged behind growth in productivity. "This suggests that workers are still being paid less than they

should be on
average," he
said. "If we
really want to
succeed in our
economic
challenge of
raising living
standards, we
must do more to
ensure that
workers are no

longer paid less than they should be on average, and in particular that we must focus on avoiding any further erosion of pay through job insecurity."Q: How to start aspx page in existing
