

HyperMotion technology is intended to replicate the experience of playing with a team of 22 real players, capturing the complexity of teamwork and player interchangeability while providing deeper tactical insight. As part of the FIFA football experience, all 22 players in a team are able to analyse the data and make tactical adjustments based on a combination of the two in a play; versus a traditional gameplay where the player makes one decision and has no doubt where everyone else is and what they are going to do. We wanted to go further than just introducing a physical representation of the players in FIFA. It is still important for the player to get his mind in the game – and in the next FIFA iteration, I believe that will be even more important. If it's not, then the player will remain detached from the experience. When I say "mind in the game," I'm not talking about psychology or even split-second decisions, but how they feel and connect with the action on the field. This is what is missing in many games these days. — EA SPORTS Executive Vice President Marc Dennis To deliver on this vision, we are replacing our Match Engine with the Simultaneous Location of Moving Objects (SLOMO). The engine is being rebuilt from the ground up as we move away from a control-based approach and strive for a more natural playing experience. We understand that the vast majority of the people who have played FIFA since the beginning have done so on the consoles, but as the goal of our football series is to deliver an authentic football experience, we have to support all platforms. That's why we are also working on the match engine to support controller-based gameplay, which is very exciting for Xbox One. FIFA's Match Engine is built upon an incredibly complex set of very specific data-driven algorithms, which was necessary to capture all the minute details in soccer and deliver unrivalled gameplay. But for a series with such huge fan bases around the world, it's a huge challenge for us to try and create a football experience that will satisfy everyone that plays FIFA on PC, Xbox or PS4. For years, we've been struggling to find a balance between satisfying hardcore fans and newcomers to the series. We have tried and tested a lot of different gameplay combinations – from simulation to arcade – but often, the results weren't that satisfying. We've been saying that we
