Pseudo-corps pur. Mod : logicheil freewareQ: Why are these linear functions convex? Why are these linear functions convex? I know that if $f(x)=x$ and $g(x)=ax^2+bx$ then $f(x)+g(x)=x^2+(a+b)x+\frac{ab}{a+b}$ is convex in x . I'm not able to see if the above functions are convex in any other way. A: hint We have $f(x)+g(x)=2x+a$ and by convexity of $f(x)$ the function in the r.h.s. is convex. Can you conclude? Q: Q: Advice for creating a C++ class library for Qt5 I have a self-made class library written in C++
