The team at DICE has used that data to add more fluidity and agility to the way players handle the ball and play with it. It's also used to improve player control in key areas of the pitch, such as passing and shooting. via 100Percent: "When we're talking about player control, it's all about the ability to maintain control of the ball," said DICE's Scott O'Gorman. "And in FIFA, you have to fight for every touch. The way we do that is by giving the players more tools to be able to keep control of the ball in any part of the field. "We use information on the player's own movements and the movements of the opposition's players to give the players more control in their dribbling, and in the mechanics of their passing and shooting - which is something that's been much improved since FIFA 11. "Our new physics engine is a foundation for these changes, and we can now take information directly from the player and create a much more realistic experience." via 100Percent: The main areas in which the physics are improved and the intensity is increased include player control, movement around goal, and juggling the ball. "In FIFA, movement and dribbling has always been difficult," said DICE's Patrick Bach. "The physics and game mechanics were not very close. There were many cases where the player would face problems when they had to use their technical skill to beat a defender. "We've introduced new physics, which help to improve the realism of how a player controls the ball and moves it around the pitch. We've also improved the way the ball flies around the pitch when dribbling, so that you get more realistic air circulation, spin and bounce. You can also see the path the ball takes, depending on the amount of spin you apply to it. This gives you more variation in how opponents react to your tricks." via 100Percent: "FIFA has always been a very realistic sport, but it's not realistic at all in the way that players move," says DICE's Craig Mitchell. "We wanted to give players more freedom in moving around the pitch, and that means we had to add more movement animations to
