Developed and marketed by Autodesk, AutoCAD was first released in December 1982 as a desktop app running on microcomputers with internal graphics controllers. Before AutoCAD was introduced, most commercial CAD programs ran on mainframe computers or minicomputers, with each CAD operator (user) working at a separate graphics terminal. AutoCAD is also available as mobile and web apps. If you want to start using the AutoCAD software but you don't have a big budget, then you may want to check out the AutoCAD LT software instead. Markup Assisted in XY Drawing (MA): Add, edit, and remove annotations from your AutoCAD drawings. Annotate using marker pens, pens, and highlighters. See annotations as icons in your drawings. Edit and remove annotations. Moved the Stencil Management Window to its own tab, the Customize Menu: The new stencils and the ability to customize them are now available in the Customize menu. OLE Automation: A new OLE Automation tool enables you to integrate dynamic or static web content into your drawings. Access web pages, websites, or documents and place them in your drawings. Smart Components: Improvements to the screen objects in the Info tab. New tabs for choosing how to display the Drawing Info window. Tool Tips: Tool tips are now easier to add. A new, tabbed Tool Tips dialog box is available from the Drawing tab when you select the Show Tool Tips button in the ribbon. Web Access (Web App): A new web app provides you with a platform for creating and publishing AutoCAD drawings to the web. Inventory Management: The new Inventory Management tab in the Drawing Center window provides an easy way to manage the quantity of material, parts, and equipment in your drawing. Some AutoCAD 2023 features are available in the Online Beta program.

Q: pyqt: how to correctly pass int from console to QListWidget? I try to connect a QListWidget to a method, which works with `self.listWidget.addItem(self.lineEdit.text())`. For some reason when I try to assign the `lineEdit` value to a variable to add it to the list it just keeps overwriting the first value. I tried to just put the variable at the `listWidget` method, but it does not seem to work either: `def add_item(self): self.lineEdit.text()`
`def populate_list(self): self.listWidget.addItem(self.lineEdit.text()) ...`
`populate_list(self)` It would seem it should work in the first method, where I just create the `listWidget` and add the first value to it.

A: The problem is that you
