I'd like to know, when is it true that $K^{\{\mathrm{sep}\}}$ is the field of definition of L/K ? This is clearly true when L/K is a Galois extension of prime-to- p degree. (this is just Galois theory: if A, B are normal, local, DVR with uniformizing parameter u and if $\sigma \in \mathrm{Gal}(L/K)$, then $A^{\sigma} = A[\frac{u}{1+\sigma(u)}]$ and $B^{\sigma} = B[\frac{u}{1+\sigma(u)}]$). It is also true for p -adic Lie extensions (applying that p is odd and L is local). Edit: I learned from a nice comment by Roquette that in general a finite Galois extension is separable (hence, assuming the separability hypothesis, this is true). I was actually confused by a remark about \mathbb{Q}_p vs $\mathbb{Q}_p(\mu_p)$, saying it was always defined over \mathbb{Q}_p , when indeed, it's separable. Let L/K be a finite separable extension of algebraically closed fields with a separable closure $K^{\{\mathrm{sep}\}}/K$. Is it true that $K^{\{\mathrm{sep}\}}$ is the field of definition of L/K ? I guess that this is true if L/K is the splitting field of a polynomial with coefficients in K (since the rational functions are algebraically closed in this case), but it is clearly false if L/K is a finite extension of \mathbb{Q}_p (think of the extension of
