. . And again I'm on the edge: That's all, now I'm going to fall. And again I'm on the edge: That's all, I beg you. My soul is on fire I want to fly with you In heaven - and down to earth So that "fi" does not fly. And no wonder the soul hurts, And it's not in vain that I'm in heaven, I'm on the edge of all prayers - And again I'm on the edge! (March, 2016)

I have some events that happened over time and it's useful to display the events to the user in order. Unfortunately I'm using a structure such as List (or LinkedList) which grows unbounded. What type of data structure is best to use with this case? A: If you're looking for a queue of event, you should use a Queue, or, if you really need ordered access to the events, a LinkedList (or maybe a Set or even a Map if the events are generated by some kind of program logic and are not to be stored for
