The best Photoshop features come from functionality that you don't even think about. And for that reason, Photoshop's most powerful tools do not always make the cut when it comes to the book of features. However, there are a handful of features that you can rely on to streamline your workflow and give you the ability to deal with your photo or design workflow in no time at all. Dealing with photographs is probably the biggest burden that most graphic designers face in their career. At some point or the other, you must either spend hours applying

the same filter to half the image or apply dozens of filters and effects, changing what you already have like a painter. There is a secret to making your workflow faster and more efficient though. By taking the time to experiment with some of the filters that are available in Photoshop, you'll be amazed to find new effects and gains in efficiency. If there's one thing that you'll find yourself appreciating as a photographer, it's the ability to make a global change to an image that has a significant effect on the entire way that the image is seen. Perhaps you want to create a specific mood or set the image in motion. All you have to do is use your brush, warp the image, or blur the background to make it look completely different than it did before. You can even use photo overlays to add a background, an object, or text to a photograph to give it a unique look. While we've all heard the phrase "Photoshop is the best photo editing software," for the most part that's not necessarily true. It's only because you can't use many of Photoshop's tools for many types of images. This is the same reason that you can take one photo and, thanks to the software's filters, make it look completely different than another photo. Adobe's software is a visual powerhouse that can do almost anything.
