Sounds of perfection. The “blue” in BLUE II Product Key stands for “cross-fusion synthesis”. But the term “cross-fusion synthesis” is not only a description of the instrument; it’s also a complete technical description. For many of the sounds that are created through this particular synthesis process, the cross-fusion generation process is called the “cross-fusion matrix”. Because of the flexibility that this matrix provides, the term “cross-fusion synthesis” was created. Papen wanted to create the best plugin possible for the modern day user. For instance, he has created a simplified learning path through the interface so that the user will be able to explore all the sounds within no time. There is also a color coded display on the main panel to help you see which effects are on and which oscillators are active. This instrument isn’t really an instrument The biggest flaw that I found in this instrument is the fact that the oscillators come pre-wired in unison. The impression that this creates is that the programmer wanted to make sure that the user is familiar with the oscillators right from the get-go. The problem with this is that it eliminates the unique character that each oscillator could have. Instead, you’re left with a typical oscillator with a modulated filter that will not

sound anything but a very basic and bland sound. I don't think that any one of the oscillators will do much for your sound, but to a certain degree I do think that having the oscillators in unison can be the reason for the complex preset that Papen has created. The LFOs sound great I wasn't expecting much from the LFOs because Papen used them to modulate the filter or the envelope. When I first heard them, I couldn't get the idea of what they were supposed to do. And it took me a few minutes to understand that the LFOs are creating the rhythm of the sound. I was impressed to see that the pattern for the LFOs is controlled by the modulation of the filter or the envelope, or the type of waveform or the amplitude modulation. It's one of the features that seems like it should work in the sound creation side, but for the reasons above, it seems like it's a way to make the synth sound more human. It is very easy to hear the

The Yamaha KX-800x is a powerful keyboard piano made for PC, but there's no reason to limit yourself to that. This compact and super portable hybrid is perfect for both professional and hobbyists who are looking for quality, durability, and an unparalleled playing experience. Its sleek design and balanced tone quality make it a favorite among performers and composers alike. Features: • Universal port • Two USB ports • Continuously variable tilt wheel • 8-track instrument recording • 128-note polyphony • Dedicated, touch-sensitive, laser-engraved piano keys • Automated key transposition • Fretboard-size space bar • Individual pedals for all pianos, including grand, practice, and electronic pianos • 11 DSP voices • Up to 9 macro buttons (2 programmable) • 4-octave range of notes • 8-track instrument recording and playback • In-built sound engine • Requires no drivers

**MULTIPLE KEYPAN IS SINGLE** The Yamaha KP-820 represents a new way of thinking about hybrid keyboards. With its dual-purpose function, the KP-820 allows you to play traditional piano sounds, while the KP-820's backlit keys translate into an impressive array of musical sounds.

Features: • Dual USB ports and stand for portable convenience • 8 onboard voices of superior sound quality • Dual function keyboard • Real piano keys and hybrid keys in one keyboard • Touch-sensitive, laser-engraved, piano keys • USB 2.0 interface • 8-track instrument recording and playback • Dedicated, touch-sensitive keys • Automatic key transposition • 8 semi-weighted keys • 4 octave range of notes • 47 key switches per voice • Model A • In-built sound engine • Requires no drivers FOR A RAPID SWITCH TO A REAL PIANO, TRY THE YAMAHA KP-820, EASY TO OPERATE AND EASY ON THE BILLIONS REAL PIANO ENCODED The KM-820 features an incredible 8 voices and 32 keyboard tones, including a number of rare and highly-sought out keys. The keys are each connected to a specific sound to form a more extensive tonal range. Features: • 5 layers of voice structure for the instrument; • 8 independent voices; • 32 keyboard tones; 2edc1e01e8

From eight powerful oscillators, the innovative cross-fusion synthesis and waveshaping techniques, and the rich soundscapes, comes a new generation of synth that pushes sonic boundaries of all kinds. It is a full version of the existing BLUE, and it takes the synth into new territory. Cross-fusion synthesis and waveshaping techniques are integrated with a number of different methods of synthesis, and the possibilities with the extensive modulation, synthesize, and effect options are endless. A number of different methods of synthesis, such as additive synthesis, subtractive synthesis, sample-based synthesis, and more, allow the creation of countless different sonic possibilities. The possibilities to create soundscapes is extensive, and so are the sounds and presets that you can use to create your own unique sound. From all kinds of instruments to classic sounds, from sound effects to complex patterns, an extensive and dynamic range of sounds are available. As with the original BLUE, in this version of the synthesizer, this is a true-bypass multi-timbral, cross-fusion synths that takes you into new sonic territories. The powerful oscillators allow you to create almost anything. With the integration of filters, waveshapers, envelopes and filters, and even multi-envelopes, it is no surprise that this instrument is packed with sound possibilities. This synth provides you with a full-featured editor that gives you the ability to sculpt your sound in the most sophisticated way imaginable. Thanks to the application of all the available modulation sources, including an XY pad and an arpeggiator, an endless array of sonic possibilities is at your disposal. A built-in sequencer that allows you to create and arrange audio patterns with ease, as well as an extensive selection of effects, and also makes it easy to create full multitimbral music. In the digital domain, this instrument is the full version of the original BLUE, and it's really easy to see why. The majority of the controls are identical to the original, and there are all the control options that you would expect. In addition, the user interface is very intuitive, and also makes it easy to quickly switch between presets and control the sounds you create with relative ease. FEATURES: - Eight powerful oscillators - Waveshaping techniques - A variety of synthesize methods - A ton of different effects - Simultaneous synthesis - A rich selection of presets - The ability to create a

He has released numerous plug-ins and instruments for the Amiga and PC platforms. Pianos was Rob's first program, launched in 1992. Since that time Rob has been at the forefront of DSP-based synthesis technology. In 2004 he released his first plugin instrument for the Mac, the UB8 (Ultra Big8), and in 2007, Pianos Expanded. In addition to his professional career, Rob is a

successful songwriter. He composed music for films and commercials as well as writing lyrics for bands like Marilyn Manson and Love Dept. Rob Papen Rob Papen is a programmer and electronic musician. He is the main inventor and developer of the "Papen Phonograph" and "Papen Synths" instruments and has also released numerous plug-ins and DSP routines for the Amiga and PC platforms.

Astronomy Picture of the Day Discover the cosmos! Each day a different image or photograph of our fascinating universe is featured, along with a brief explanation written by a professional astronomer. 2015 September 2 Explanation: The dramatic Geminid meteor shower reaches its peak early Friday and next weekend, the skies will be filled with hundreds of fast-moving icy fragments. In this sharp crescent Moon time exposure, the upper left hand side of the frame is a milky band of haze. A prominent trail of a departing Geminid meteor is silhouetted against the haze in the lower right. The background stars are faint with a bright splotch of planet Saturn at lower right. About 15 meteors per hour are expected during the shower's peak. While skygazers can expect to see a few Geminids every hour, the fast-moving speed of the meteors makes it difficult to gauge the count reliably. Meteors are generally visible from around the world during the week after the new moon.
