Installation of a CSI 13.15\_3 Service: DemoQ: Efficient algorithm to sort pandas dataframe efficiently for information retrieval There's a similar question asked here but the objective there is not the same as mine. I'm trying to create a large dataframe of 1.3M rows and 10 columns. I'm trying to sort this dataframe based on the first column (Answered by user) and filter only the rows where the Answer column is greater than 0. To do this, I'm using this code and it's very slow. `df_sorted = df.sort_values('Answered by user')` `df_only_answers = df_sorted[df_sorted['Answered by user'] > 0]` If anyone has a better solution, that would be great! I'm happy to provide more info. Thanks A: As you mentioned in the comment, this is a time operation, and since the Answered by user column has the same length as the Datetime column, you could apply the ordered categorical to it and sort as follows: `df['Answered by user'] = pd.Categorical(df['Answered by user'])` `df['Answered by user'].cat.codes = ordered_categories` `df = df.sort_values('Answered by user').drop('Answered by user', axis=1)` Q: How can i make a tooltip pop up after a scroll? How can i make a tooltip pop up after a scroll? I want to popup this div after scrolling, but it's not working :( This is my code. ` Tooltip Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed diam nonummy nibh euismod tincidunt ut laoreet dolore magna aliquam erat volutpat. Ut wisi enim ad minim veniam, quis nostrud exerci tation ullamcorper suscipit lobortis nisl ut aliquip ex ea commodo consequat
